## Customer Reviews

You get what you pay for with this book. I had purchased this book along with another book to help study and I am thoroughly disappointed in this product. You canâ™t read the labeling, nothing is marked in the book, it is not a proper illustration of the muscular system and it looks like something I would give a fourth grader. There is a reason they donâ™t show photos of the inside. Please donâ™t waste your money! If youâ™re going to get a book to help study get âœThe anatomy coloring bookâ• because that one is at least properly labeled(linked

Realistic, is the word I would use to describe this coloring book and also one of the frequent word I continually heard from my O.R. co-workers when I showed them this book was, "You can see the actual muscles".I was looking for a muscular system coloring book that was a coloring book, not a convoluted page that was so crowded you can't make out any of the illustrated muscles because they were so small.This book doesn't have that problem, except for some of the pages with three labeled illustrations on them, but they are there for you to see the anterior, lateral and posterior views of that particular extremity, side by side.So in a nutshell for an example you have the anterior,

lateral, and posterior arm unlabeled; which you can easily see and color each individual muscle. Next you have the same extremity with all three views labeled and again you can color each individual muscles but this time all the muscles are labeled. And once more, now you have all three positions, anterior, lateral, posterior on the same page label to view side by side and color again. I like this lay out concept, because it appears to me your being force to learn from repetition. Using my example above, as far as how many times your given the opportunity to color each of the illustrations above, 3 time for each position; which give you a total 9 times. Love it.

Suggested supplies needed: 1. One regular pencil 2. One box of coloring pencils You'll have 6 or 8 example of each illustrated anatomic position to work with: 1. Anterior body unlabeled (Your required to draw a line to each muscle and label and color each one) this action will reinforce and help you remember each muscle name and its location. 2. Anterior body labeled (Use this illustration as your reference for your unlabeled illustration) and you can color this illustration. 3. Lateral body unlabeled ( Fine muscles and draw a line to them and label them then color them). 4. Lateral body labeled ( This illustration is your reference for the unlabeled illustration, coloring this illustration will reinforce the action you took with the unlabeled version) 5. Posterior body unlabeled ( Identify each muscle and label them and color them). 6. Posterior body labeled ( Color each labeled muscle and use this illustration as your reference for labeling the unlabeled posterior body). 7. Anterior, Lateral, Posterior illustration unlabeled. 8. Anterior, Lateral, Posterior illustration labeled. The act of doing all of the above will reinforce your memory of the location and name of each of the muscles.

I wish I had seen the one star review here before ordering. 1) The line drawings are very light in my copy, and it is difficult to see some of the lines going to the muscles; 2) some of the full body illustrations are 'Squashed' onto the page, making the body look "obese"... not sure why this was done, because the same illustration on the subsequent pages are not distorted. 3) I know this is not a grammar book, but it has numerous errors that were not edited out (your instead of you're, etc.,) -- which doesn't affect the coloring aspect, but just made the whole thing seem more juvenile. As the one-star reviewer said... it's cheap for a reason. Only buy this if you cannot possibly find anything else. For elementary school....maybe. For anyone studying anything more advanced, I would NOT recommend this.

I originally purchased this coloring book to familiarize my 12 year old with anatomy, however both my 6 year old and 15 year old fell in love with the Muscular System Coloring Book. The book is

extremely detailed and allows users to color and learn at the same time. It is very educational and offers my kids hours of fun daily.

Length: 2:43 Mins

I was looking for a Muscular System refresher book for a course I'm about to take and I came across this coloring book. I read the reviews and two of them stuck out Emily and Rahlan "RahlanJ" and after reading what they had to say the first word that came to mind was hater, and it appeared that they know each other, so I bought this coloring book (I can't image what type of patient care they would be involve in with that attitude).Why I'm I doing this? This past Christmas I was hated on by two haters, on Christmas day.Once I got it and looked through it, the T.V. show "What Would You Do" came to mind, so I asked a friend; who's into doing videos to do a video for me.The unlabeled illustrations are larger because you can label each muscle and also draw a line to each one and label them.I'm in the medical field because I like helping people directly and indirectly, build them up.If you purchase this coloring book an you fine something wrong, please do a constructive review, i.e. constructive recommendation.Just like the title says, this is a coloring book not a text book, judge for yourself.
