"The DC Comics Guide to Pencilling Comics" by Klaus Janson introduces wannabee comic book artists and fans of the art form to a more detailed appreciation of what goes into drawing pages for "Batman" than they will have picked up through osmosis or imitation to date. Janson divides the fifteen chapters in this volume into three parts focusing on Drawing, Storytelling, and Pencilling designed to provide an introduction to one of the most difficult of art forms: Part One Drawing: (1) Materials outlines what supplies an artist needs in terms of paper, pencils, erasers, rulers and templates; (2) Shapes are presented as the foundation of the creative process of drawing, the

general concept from which the artist moves to more specific ones; (3) Faces looks at both the basic geometric elements in composing a face and the artistic range available through example of faces drawn by Joe Kubert, Gil Kane, and Neal Adams; (4) Anatomy covers both the structure and design of the human body, including all the muscles, with special attention paid to the most difficult thing in the world to draw, the hands; (5) Clothing establishes the four basic dynamics that shape the folds and wrinkles of a person's clothing; and (6) Perspective, which is covered from the fundamentals to the use of vanishing points and systems of perspective. This unit is the most instructive in the book since it deals with the basic building blocks.

I was reading Klaus Jansen's book, the "DC Guide to Pencilling Comics" and the "DC Guide to Inking Comics", and really found them to be "must have" books, full of extremely useful information, on setting up art pages for comic books. One of the things the books say is to concentrate on one discipline or the other, but not both at the same time. Later on, after you've mastered both, then you can do both parts of it. The author Klaus Jansen describes how he goes about setting up his layouts for a comic book page. Of course, every artist works differently, and Klaus Jansen doesn't draw characters quite as large, or bold (using the "grid layout" for the panels) as Marvel and DC's legendary artists: Jack Kirby, Neal Adams, John Romita, or Sal Buscema. Today, the artists seem to cram as many panels per page as they can. Klaus Jansen was also the inker on Frank Miller's "The Dark Knight" graphic novel. Klaus now does his own drawing and inking, as well as teaching comic book illustration. Here is a very brief description of what's covered in this book: About the comic book drawing phase: The aspiring comic book artist (whether drawing or inking) need about 2 scenes of comic book pages, to submit as samples. Each scene should be about 2 or 3 pages of those comic book 11" x 17" pages. They are 2-ply or 3-ply smooth bristol pages. Normally the comic book companies supply the blank 11" x 17" pages. But you can also buy them for [...]. (I've bought page packs from them before) The method that the book author Klaus Jansen recommends is to start doing very rough layouts, or doing thick black marker sketches only, of what will go in each panel, on separate white or vellum paper. Saved the rough penciling for the next step.
